Health Benefits of COLORING

1. Reduces stress and anxiety.

- According to Mayo Clinic Health System...
"Coloring is a healthy way to **relieve stress**. It **calms the brain and helps your body relax**. This can improve sleep and fatigue while decreasing body aches, heart rate, respiration, and feelings of depression and anxiety."
- Coloring has the ability to relax the fear center of your brain, the amygdala. It induces the same state as meditating by reducing the thoughts of a restless mind. This generates mindfulness and quietness, which allows your mind to get some rest after a long day at work.

2. Promotes mindfulness.

- Coloring helps you stay in the moment and build your focus stamina, just what's needed for taking lengthy tests.

3. Embraces the imperfect.

- There is no right or wrong answer with coloring.

4. Improve motor skills and vision.

- Coloring goes beyond being a fun activity for relaxation. It requires the two hemispheres of the brain to communicate. While logic helps us stay inside the lines. choosing colors generates a creative thought process.

5. Improve sleep.

- We get a better night's sleep when avoiding engaging with electronics at night because exposure to the emitted light reduces your levels of the sleep hormone, melatonin. Coloring is a relaxing and electronic-free bedtime ritual that won't disturb your level of melatonin.

6. Improve focus.

- Coloring requires you to focus, but not so much that it's stressful. It opens up your frontal lobe, which controls organizing and problem solving, and allows you to put everything else aside and live in the moment, generating focus.

7. Replace Negative thoughts.

- "concentrating on coloring an image may facilitate the replacement of negative thoughts and images with pleasant ones," Dr. Joel Pearson, a brain scientist at the University of New South Wales in Australia told Medical Daily.
